

ABSTRACT OF THE DISCLOSURE

An apparatus that adjusts an angle of image device for information processing equipment such as a portable computer, a computer for a Liquid Crystal Display (LCD) monitor, and a Personal Digital Assistance (PDA) in which a display device is rotated from a main body or supporting member adjusts according to rotation of the display device to maintain a desired angle of the image device. The information processing equipment can include a main body with a plurality of key buttons and a display body including a display unit and rotationally coupled to one side of the main body. An image device unit is installed on one side of the display body for holding the image device. A connecting link rotates the image device unit in accordance with the rotation angle of the display body against the main body. Therefore, the angle of image device such as a camera can be automatically controlled according to the movement of the display body.
